- International Residential Code (IRC) 2006
- Building Official Code Administration (BOCA) 1993

- Uniform Plumbing Code (UPC) Section 301.2
- Alternative Materials and Methods 2003
- National Plumbing Code of Canada 2005

*• With ASSE approval we conform to requirements of NPC 2005.*

## How the Ayrlett® AAV works

AAVs are one-way valves that allow air in, to vent (equalize pressure) the waste pipe, but do not allow gases, odors or liquids out. Ayrlett brand AAVs have been tested by an independent lab 500,000 times, in temperatures ranging from -40 to + 150 F, without a single failure.

When the fixture is discharging, it creates negative pressure which opens the Ayrlett AAV allowing fresh in.

During non-use, the diaphragm is held in the closed position by gravity. Positive back pressure pushes the diaphragm closed with greater force. The stronger the back pressure, the greater the closure force; consequently, liquids, gases and odors cannot escape.
